

Help us improve your water quality

Dear Veolia Customer:

As part of our commitment to remove all lead and galvanized service lines from the system, Veolia needs your assistance. We are asking you to check the water service line in your home to help determine the pipe material. Water service lines are small pipes that connect our water main to your home. In our records, your service line is listed as an unknown material type. We want to determine if the pipe is made of copper, plastic, lead or other material.

If your pipe is lead or galvanized, we will replace it at no cost to you.

For information about our lead program and to report your finding, visit: <https://bit.ly/3NNCrcH>

To go directly to the identification survey, visit: <https://bit.ly/3RF71qZ> or use the QR code below.

You also have the option for a Veolia Representative to visit your home to identify your service line material. Please contact our Customer Service Department to schedule an appointment.
